MergeBase

SCA Runtime Protection™ Break the Kill Chain!

MERGEBASE:
THE ONLY SCA PLATFORM THAT CAN BLOCK KNOWN JAVA EXPLOITS WITHOUT PATCHING

With MergeBase's patented SCA Runtime Protection feature, you can choose to monitor or block any Java-related CVE, either the whole software library or the specific vulnerable function.

In the past, the only option was to wait for a patch to be applied and hope it did not break your application when updated. After learning that a new Java CVE impacted your software supply chain, like struts or log4j, you had to rush to remediate immediately as you were not safe until patched.

Now with Java Runtime Protection, you can break your attackers' kill chain, buying your team as much time as needed to calmly remediate without risk. No more sleepless nights or frantic midnight patching runs since MergeBase empowers you to monitor or block the vulnerable Java component or function.

WITH RUNTIME PROTECTION, YOU CAN BREAK YOUR ATTACKERS' KILL CHAIN BEFORE THEY STRIKE!

Reduce Attack Surface & Operational Risk with SCA Runtime Protection™

Harden your line-of-business applications by reducing your attack surface with SCA Runtime Protection. Now you can dramatically reduce vulnerability to zero-day attacks and CVEs by shutting down access to all unused third-party Java libraries and functions.

MergeBase SCA Runtime Protection empowers you to perform real-time software runtime monitoring to learn what third-party dependencies are actively used by your enterprise applications, allowing you to intelligently shut off the execution capability of all unneeded Java components and methods, preventing known exploits or CVEs as well as unknown or zero-day attacks.

More time-saving reasons to explore MergeBase's SCA Platform:

Highest SCA Accuracy in the industry

MergeBase is the most accurate software composition analysis (SCA) scanning tool for 11+ programming languages, especially C, C++, C#, .NET, Elixir, Scala, and Java. With the lowest rates of false positives, MergeBase saves valuable time for security professionals and software developers, accelerating secure deployment.

Most Complete SBOM support available

MergeBase offers a complete software bill of materials (SBOM) feature set, supporting SPDX & CycloneDX and the full dependency tree. Since government and enterprise customers now often require an updated SBOM before any technology purchase, this feature is crucial for both security and driving sales.

Comprehensive DevOps Integration & SDLC Support

Best-in-class Developer Guidance & Remediation Support

Automated Compatibility Checking & Technical Debt Analysis

OSS License Compliance Reporting
